Hiplaas Autopsy Saw

Designed with the user in mind, the Hiplaas Autopsy Saw is equipped with state-of-the-art risk prevention features. It boasts advanced technology and a sealed housing specifically constructed for autopsy use. This cutting-edge tool is available exclusively from Hiplaas.

Premium User Safety Features

IMMERSIBLE HANDPIECE

Unlike other saws, the saw is hermetically sealed to prevent shock from liquid contact. The entire handpiece is submersible to ensure effective cleaning. The sealed construction also reduces the risk of specimen inhalation caused by debris atomization from motor contact.

LOWER VOLTAGE

The handpiece is a mere 40 volts, thus lowering the chance for injury should the cord be mistakenly cut. Despite the lower voltage, the cutting power of the unit remains top-grade. Lower voltage means reduced heat: a cooler touch for the user and less wear on the saw motor.

UNIQUE ARBOR MOUNT

Saw blades can be easily changed via the top-mounted arbor to reduce the risk of injuries that can occur with radial mount blades.

Improved Design

WEIGHT DISTRIBUTION

To prevent fatigue during repeated use, the saw is designed to balance weight between the front and back of the unit. This even distribution minimizes hand and wrist strain.

QUIETER OPERATION

The sturdy construction houses a quieter motor to reduce noise distraction and saw vibration during autopsies.

Notable Value

MODEST PRICING At a competitive price, this saw fits comfortably in every budget.

BLADES INCLUDED

Four premium chrome plated blades are included. These blades cut more aggressively for quicker work and longer blade life.
